COVER LETTER

Date: February 17, 2026

Dear Hiring Manager,

I'm writing to express my interest in the DevOps Engineer position. As a **Senior Software Engineer** at AppsCode, I have built cloud-native platforms at scale, engineered SRE solutions with 99.99% failover resilience, and developed Kubernetes-based storage and disaster-recovery systems.

Golang is my core strength and primary engineering tool. I use Go to design high-performance, concurrent, and fault-tolerant distributed systems, with a strong emphasis on efficiency, reliability, and clean architecture. My work frequently involves building high-intensity concurrent workflows, gRPC services, and cloud-native controllers where performance and stability are critical.

At AppsCode, my experience spans DBaaS on Kubernetes, Kubernetes storage and CSI development, automation and database migration tooling, observability and GitOps practices, and multi-cloud storage integrations.

Please find my resume attached for additional details on my projects and contributions. I would welcome the opportunity to discuss how my experience aligns with your team's needs.

Thank you for your time and consideration.

Yours Faithfully
Anisur Rahman
Sr. Software Engineer at AppCode
